Image Level Metadata Project Instructions

The purpose of an ILM project is to provide FamilySearch with the metadata needed to evaluate the patron accessibility to the images on our site.

The three values needed for historical records are: event year, record type, and registration locality.

Some images contain records with no historical data. Those images will not require those three values. They will only require the record type and the locality (country only). For specific instructions regarding these types of images, see Appendix A.

Registration Locality (EVENT_PLACE_ORIG)

Enter or select the locality where the document was created, or in other words, the locality where the registration of an event took place. Only the highest two levels of jurisdiction are needed: state and country. Sample value: New York, United States. The data entered should include the state and country values and the locality ID taken from our FamilySearch Places database.

As a rule, please use the historical locality when available in the database. If the historical locality you need is not in the database, please use the modern locality or contact the FamilySearch representative assigned to the project.

If an image includes records created in multiple states or countries, please enter each state/country combination in a different entry.

If the locality is not included in the record, it may appear on the title page, the cover or spine of the book or file.

For a list of the localities expected in this project, please see Appendix B.

Record Type (FS_RECORD_TYPE)

Record type is a term used by FamilySearch to describe a category of records which matches the content and purpose of the record.

The record type entered or selected in this field must come from the record type database called Controlled Vocabulary. The record type name and concept ID should be included. The record type should be as specific as possible. As a rule, do not select a very general record type, such as Vital Records, Religious Records, or Legal Records. If an image includes more than one record type, please select all the necessary record types and add the corresponding Event Year and Registration Locality for each record type.

Event Year (EVENT_YEAR_ORIG)

Enter a four-digit year for the event being recorded in the document. For example, if the image is of a birth registration record, the event being recorded is the birth. Therefore, enter the birth year of the person whose birth is being registered.

If an image includes events that occurred in different years, please enter an event year for each event included in the image.

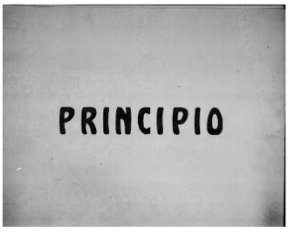
DRAFT

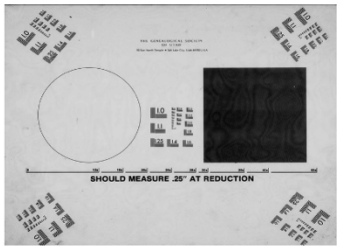
Appendix A

For images of historical records with no genealogical data, please use the following three record types:

Administrative Image (135026)

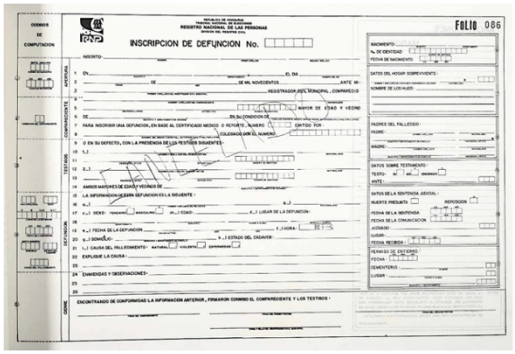
Use this record type for images with no genealogical data, such as microfilm title boards, calibration targets, quality tag images, “end of roll” sticker, “continues from previous roll” sticker, and microfilm number sticker.

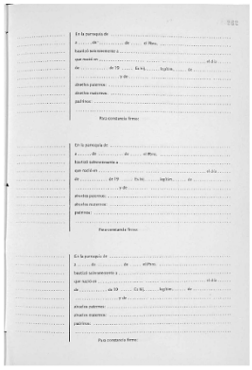


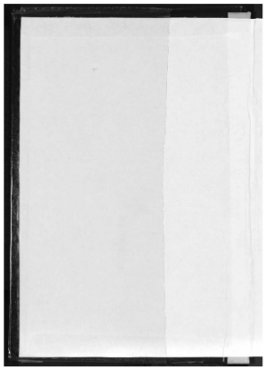


No Extractable Data Image (135165)

Use this record type for images with no extractable data related to individuals, such as images of blank forms, incomplete records with no personal information, blank pages, etc.

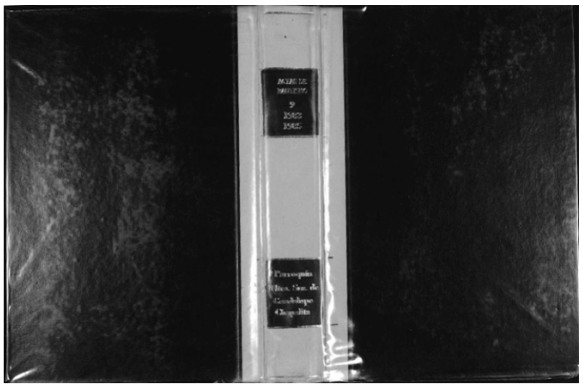


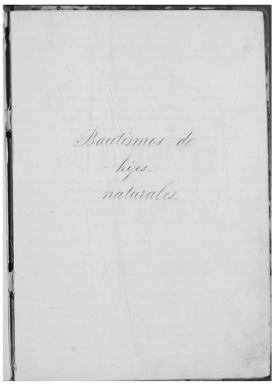


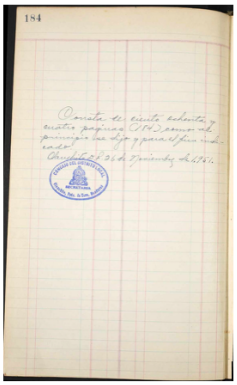


No Genealogical Data Image (135784)

Use this record type for images with no genealogical data related to individuals, such as images of covers, title pages in the books, opening or closing statements, tables of contents, etc.

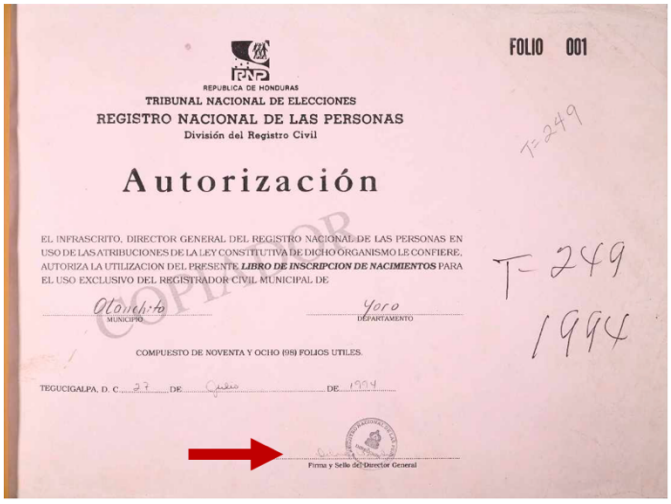






IMPORTANT: If any images contain names or signatures of individuals, DO NOT USE the record types explained above, but describe images using the record type of the images surrounding it. The only exception allowed is for the name of the photographer in the microfilm title board.

The following examples show images that cannot be described using the three record types explained above, because they include names or signatures.



FOLIO 001

REPUBLICA DE HONDURAS
TRIBUNAL NACIONAL DE ELECCIONES
REGISTRO NACIONAL DE LAS PERSONAS
División del Registro Civil

Autorización

EL INFRASCRITO, DIRECTOR GENERAL DEL REGISTRO NACIONAL DE LAS PERSONAS EN USO DE LAS ATRIBUCIONES DE LA LEY CONSTITUTIVA DE DICHO ORGANISMO LE CONFIERE, AUTORIZA LA UTILIZACION DEL PRESENTE ***LIBRO DE INSCRIPCION DE NACIMIENTOS*** PARA EL USO EXCLUSIVO DEL REGISTRADOR CIVIL MUNICIPAL DE

Olanchito (MUNICIPIO) Yoro (DEPARTAMENTO)

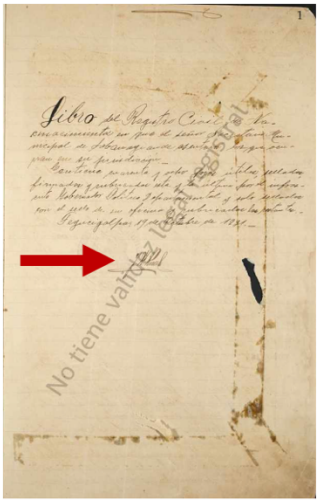
COMPUESTO DE NOVENTA Y OCHO (98) FOLIOS UTILES.

TEGUCIGALPA, D. C. 27 DE Julio DE 1994

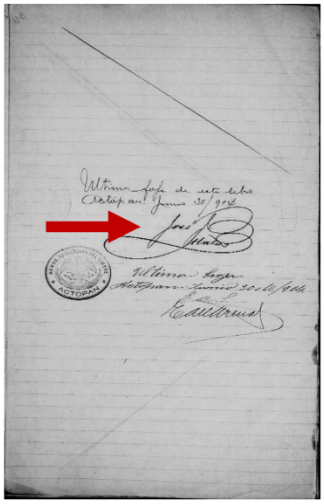
Firma y Sello del Director General

T-249

T-249
1994



No tiene valor de documento oficial



The images above are examples of opening or closing statements in vital record books. In cases like these, please use the record type for the images that follow or precede these images.
Example:
The first image above (left) is the opening statement in a book of birth records (*Libro de inscripción de nacimientos*). Because it includes a signature, we cannot use the record type No Genealogical Data Image. The rule states that we must use the record type of the preceding or following images, which in this case are birth records. So, for this image, the three metadata values to be entered are:

Record Type: Birth Records
Registration Locality: Yoro, Honduras
Event Year: 1994

If the image does not include event year and/or registration locality, please take those values from the preceding image. If there is no preceding image, take them from the following image.

Appendix B

The following is a list of the localities that we expect to find in the images included in this project. If you need a locality that is not available here or in the FamilySearch Places database, please contact the FamilySearch representative assigned to the project.

RepId	State (or equivalent)	Country
